OFFICIAL PRESENTATION OF NEREVA

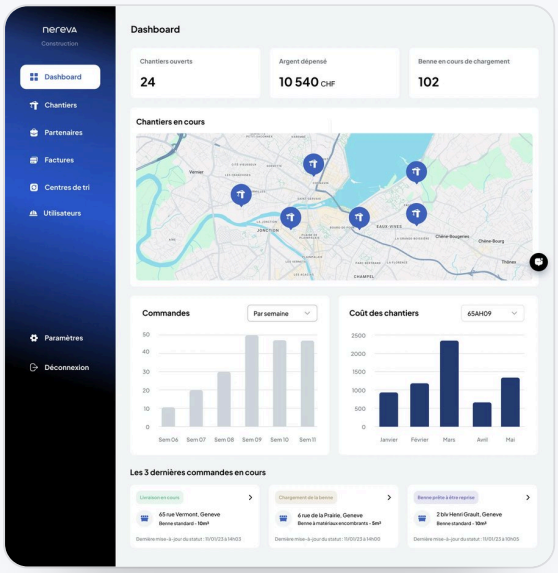

About Nereva

A Swiss company founded in 2023, Nereva is a B2B SaaS platform dedicated to construction transport flows. Its ecosystem is built on two complementary vertical software products: an environment for construction companies, with a back-office and the “Nereva Commandes” mobile app, and a complete TMS for transport companies, combined with the “Nereva Transports” mobile app for drivers. A real-time synchronisation layer links these environments to ensure absolute continuity of information, from the order on site to the execution of the transport. By combining these tools, Nereva facilitates coordination, traceability and real-time monitoring of operations between construction, transport and the field.

TWO SOFTWARE PRODUCTS, ONE PLATFORM

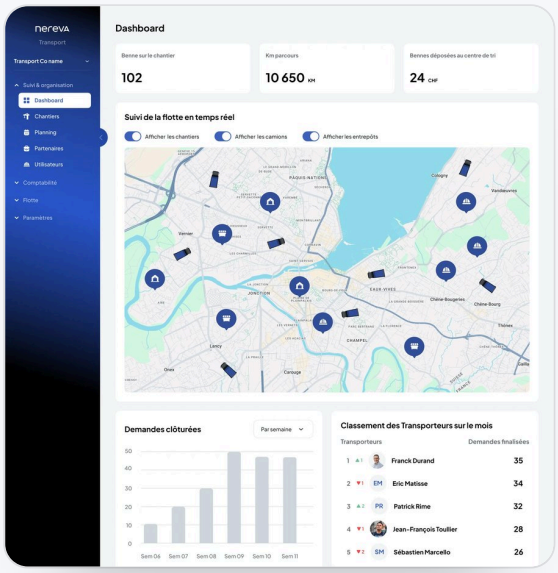

Construction and Transport, brought together on the same information

Construction companies are where the needs originate: planning the works, ordering skips, organising material transports, removing waste. Transport companies mobilise the means: trucks, drivers, planning. Nereva links the two with Nereva Construction and Nereva Transport, two software products that communicate natively on a shared platform.

Nereva Construction

For construction companies: a back-office and the Nereva Commandes mobile app, to create, transmit and follow construction transport requests, skips, materials and waste.

Nereva Transport

For transport companies: a complete TMS, with a back-office and the Nereva Transports mobile app for drivers, usable on its own, even when customers are not yet on Nereva.

Synchronisation

When the construction company and the transport company are both on Nereva, the request of one arrives in the planning of the other and execution is reported back to the site. Each keeps its own account, partners and commercial terms; Nereva takes no commission on operations.

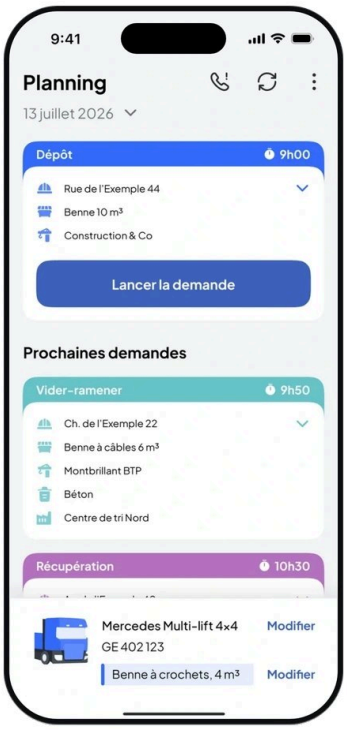

THE MOBILE APPLICATIONS

Nereva Commandes · Nereva Transports

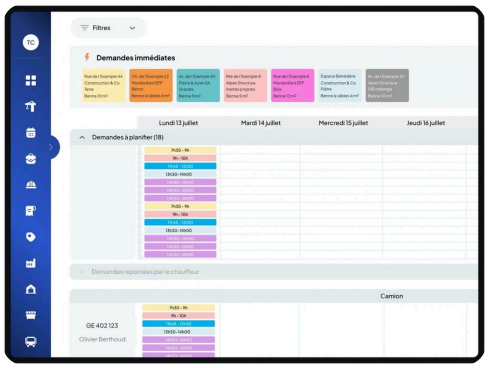

Nereva Commandes lets the site order and follow; Nereva Transports guides the driver from one mission to the next. Both are designed to be read on a phone, with gloves on.

NEREVA COMMANDES

NEREVA TRANSPORTS

TRANSPORT BACK-OFFICE

EVA, ENGINE FOR VIRTUAL ANTICIPATION

IN TRAINING

EVA is Nereva's artificial intelligence. For two years it has been training on photographs from the field: individual recognition of skips, visual analysis of waste, bulk materials and mixtures. These recognition and estimation capabilities are still in training; they are not presented as available.

PUBLISHED REFERENCES

In the field, with the companies that use Nereva

Every reference published on www.nereva.com carries its real status: pilot company, case study or testimonial. M. Ducret SA (transport, Geneva) is Nereva's pilot company; the other references and their status are presented on the Our clients page.
